Native American homes/shelters - Research Project (mini)

The topic of my research is the: Earth'en home

The most significant characteristic of the Earth'en home is:

The ance was a long coverd hall way
of poles and dirt. Usually they were about
40 feet in diameter and 15 feet high.

One of the most important things I learned about the Earth'en home was:

A lot of villages were made of earth.
30 to 50 people lived in each lodge.

The lodge was the main living area
for the people. The older women took care of
the children in a diffrent part of the
lodge. There are three sections; one for
the middle aged who cook, one for young women
learning their job, and one for the older women who take care of

One of the Earth'en home's strengths was:

It could divide in to 3 houses
and it could divide in to 2 sections.
It was made of heavy stake posts.
They were warm in winter and cool in summer.

One of the Earth'en home's weaknesses or limitations was:

In heavy storms the dirt might fall
off. The Earth'en home was not portable.
